SẮC KÝ v2

DIARY MODULE
PRODUCT, UX & UI IMPLEMENTATION SPECIFICATION v1.0

Design baseline for Codex implementation
Desktop priority: MacBook / 16:10

Module	Diary
Version	1.0
Lifecycle	Draft → Done → Read/Edit
Daily rule	1 Diary / user / local calendar day
Prompt rule	~9 available, max 6 selected
Explicit removal	NO Diary color picker

0. Purpose

Tài liệu này khóa product model, lifecycle, UX behavior, data semantics và visual composition cho Diary v2. Nó được dùng làm implementation contract để Codex không tự suy diễn từ UI cũ.

- Một Diary canonical object cho mỗi local calendar day.
- Title bắt buộc + Overall bắt buộc + optional narrative prompts.
- Daily main emotion và same-day Check-ins đều optional và được dùng đồng thời.
- Check-in weights độc lập, không cần cộng thành 100%.
- Tối đa 4 ảnh; media storage định hướng Google Drive/external storage, không lấy Supabase Storage làm mặc định.
- Draft nằm trong History và có thể hoàn tất sau.
- Viết bù chỉ đi từ History/Calendar.
- Không còn color picker của Diary.

1. Product North Star

Diary là daily journal nhẹ, không phải rich-text editor phức tạp và cũng không phải form questionnaire. User luôn có một dòng tự sự chính, sau đó có thể mở rộng bằng prompt, emotion, Check-in và hình ảnh.

2. Locked Product Rules

2.1 One Diary per day

- Mỗi user chỉ có tối đa 1 Diary entry / local_date.
- Date semantics dùng local calendar date của user.

2.2 Landing states

- No entry → Empty state + Bắt đầu viết.
- Draft → read-like preview + badge Bản nháp + Tiếp tục viết.
- Done → read-only + Chỉnh sửa.

2.3 Required content

- Title bắt buộc, plain text, max recommended 120 chars.
- Overall bắt buộc, plain multiline, không yêu cầu minimum length ngoài trimmed non-empty.
- Prompt responses optional, max 6.
- Daily Emotion optional; Check-ins optional; images optional.

2.4 Lifecycle

- Save Draft giữ status Draft.
- Mark Done → Done + read mode.
- Edit Done không tự downgrade về Draft.
- Delete làm ngày đó trở lại trạng thái chưa viết.

3. Canonical Data Model

Field names dưới đây là conceptual contract; Codex phải map vào schema/repository hiện có thay vì tự migrate nếu không cần.

DiaryEntry

- id
- user_id
- local_date
- status: draft | done | deleted
- title
- overall_text
- daily_emotion_id?
- daily_emotion_snapshot?
- created_at
- updated_at
- completed_at?
- deleted_at?

DiaryPromptResponse

- diary_id
- prompt_id
- prompt_snapshot
- position
- response_text
- is_done
- created_at
- updated_at

DiaryCheckinLink

- diary_id
- checkin_id
- weight_percent
- position
- created_at
- updated_at

DiaryImage

- diary_id
- external_file_id / external_url
- position
- caption?
- metadata
- created_at

4. Prompt System

- Prompts lấy từ Prompt DB/reference source hiện có.

- Prompt DB có type/module discriminator; exact field/value cho Diary phải verify từ DB hiện tại, không tự invent.
- Khoảng 9 prompt active; user chọn 0–6.
- Mỗi prompt có thể có VN/EN text, emoji, hex_color, description, active, sort_order.
- User tự quyết định thứ tự selected prompts; thứ tự phải được giữ.
- Mỗi prompt có plain multiline response + tick Done riêng.
- Prompt Done chỉ là personal progress cue, không phải validation gate.
- Nếu đã viết text rồi remove prompt thì confirm trước khi bỏ nội dung.

5. Emotion, Check-in & Media

5.1 Daily Main Emotion

- 0–1 emotion từ canonical 117 Emotion set.
- Không có intensity.
- Được dùng đồng thời với attached Check-ins.

5.2 Attached Check-ins

- Chỉ Check-in cùng local_date của Diary.
- Nhiều Check-in cùng ngày được attach.
- Unknown Check-in attach được; nếu nhiều Unknown phải hiện brief + time để phân biệt.
- Mỗi link có slider 0–100%; giá trị độc lập; không cần tổng = 100%.
- Diary weight không được thay đổi Check-in intensity hoặc Orb.

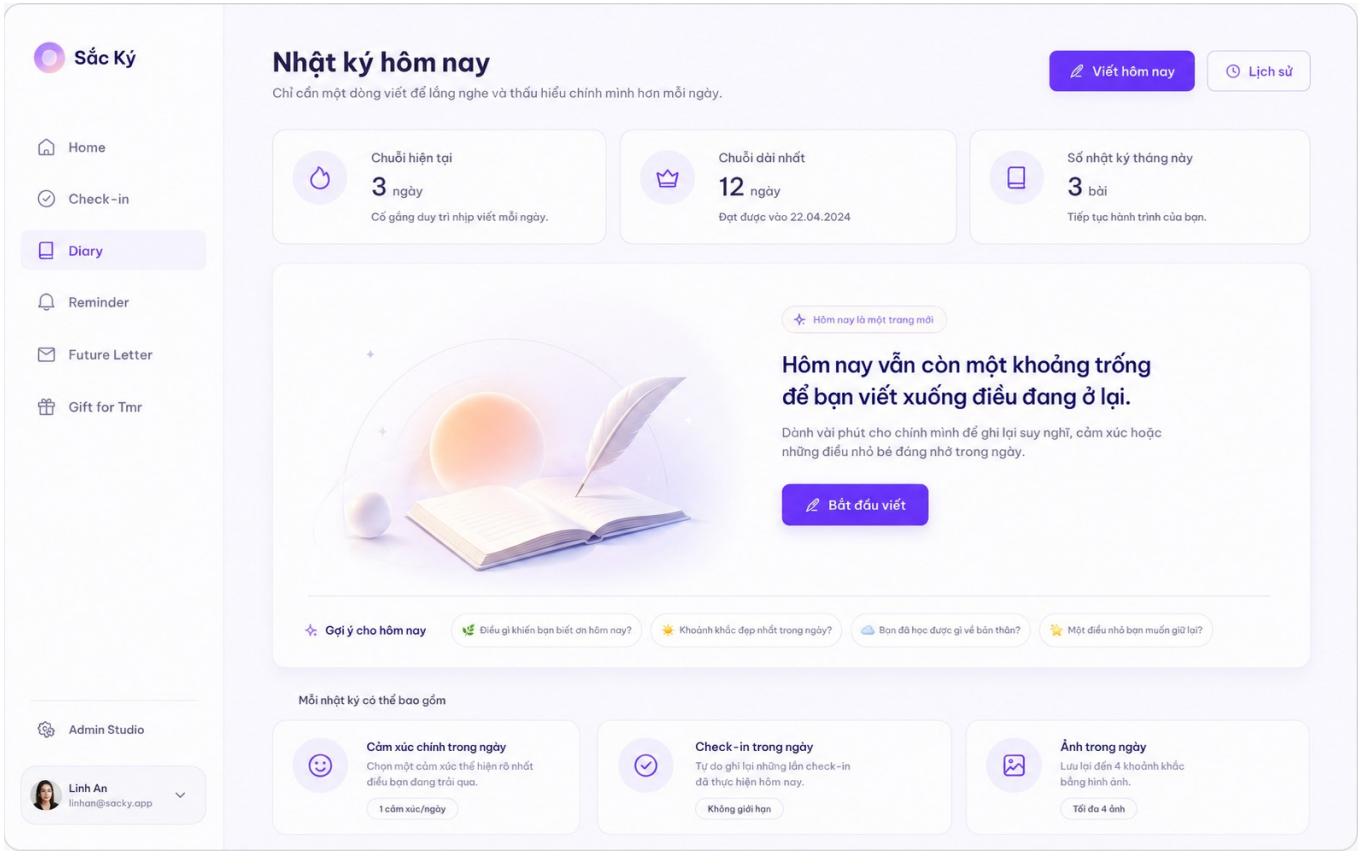

5.3 Images

- Tối đa 4 ảnh.
- Add / Remove / Replace / Reorder.
- Caption optional.
- V1 image only.
- User sẽ cung cấp Google Drive location/link; exact upload/auth integration TBD.
- Không thiết kế storage dựa trên Supabase Storage như nguồn cuối.

6. No Diary Color Picker

Diary không có user-selected color. Prompt hex chỉ là presentation accent nhẹ: icon halo, 1px tint border, soft surface wash hoặc tiny status accent. Không biến prompt color thành app chrome.

D01 — Landing / Empty Today

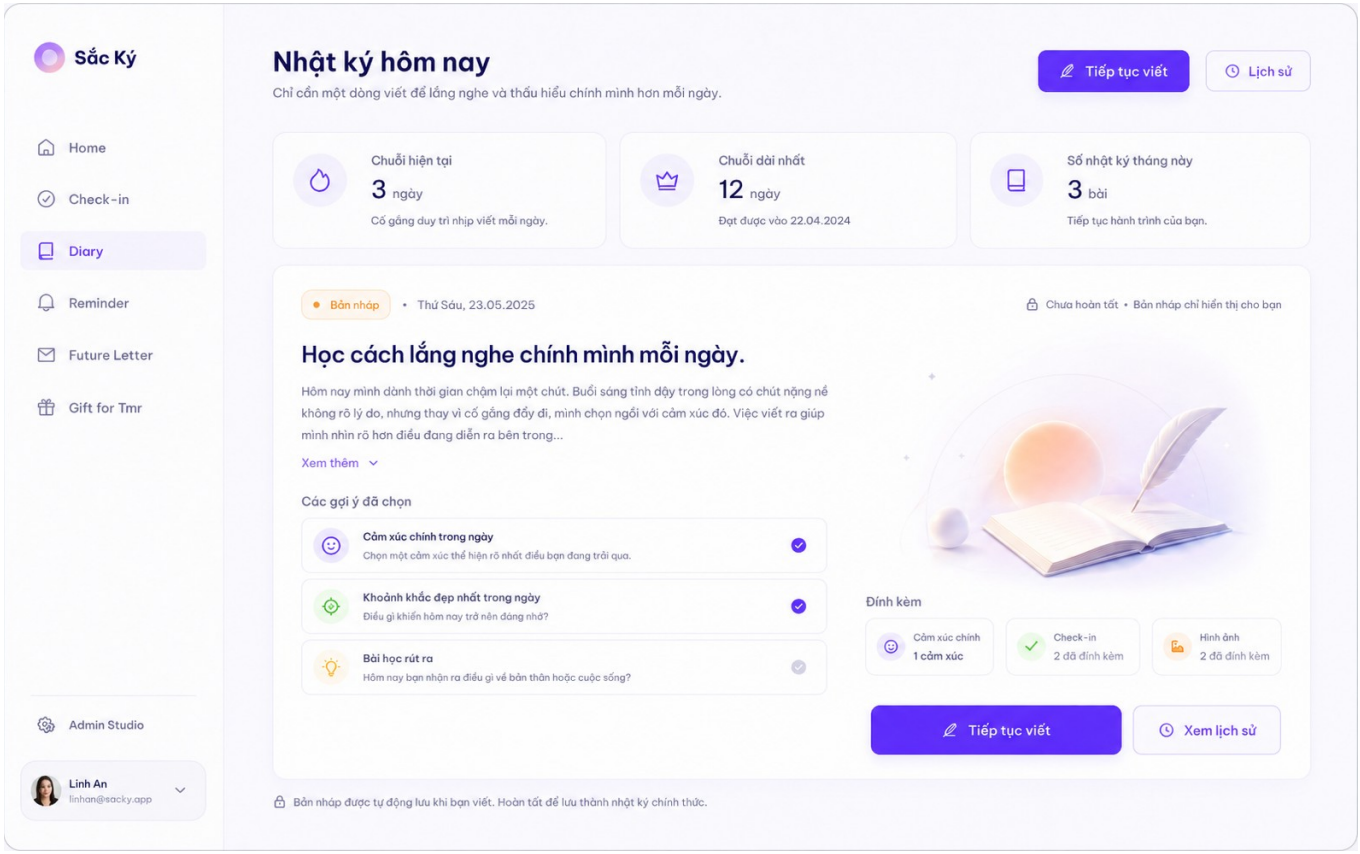

Approved directional mockup — D01 — Landing / Empty Today

Implementation requirements

- Empty state của hôm nay.
- Dashboard nhẹ: current streak, longest streak, monthly count.
- Hero duy nhất với CTA Bắt đầu viết.
- History CTA luôn visible.

D02 — Landing / Draft Today

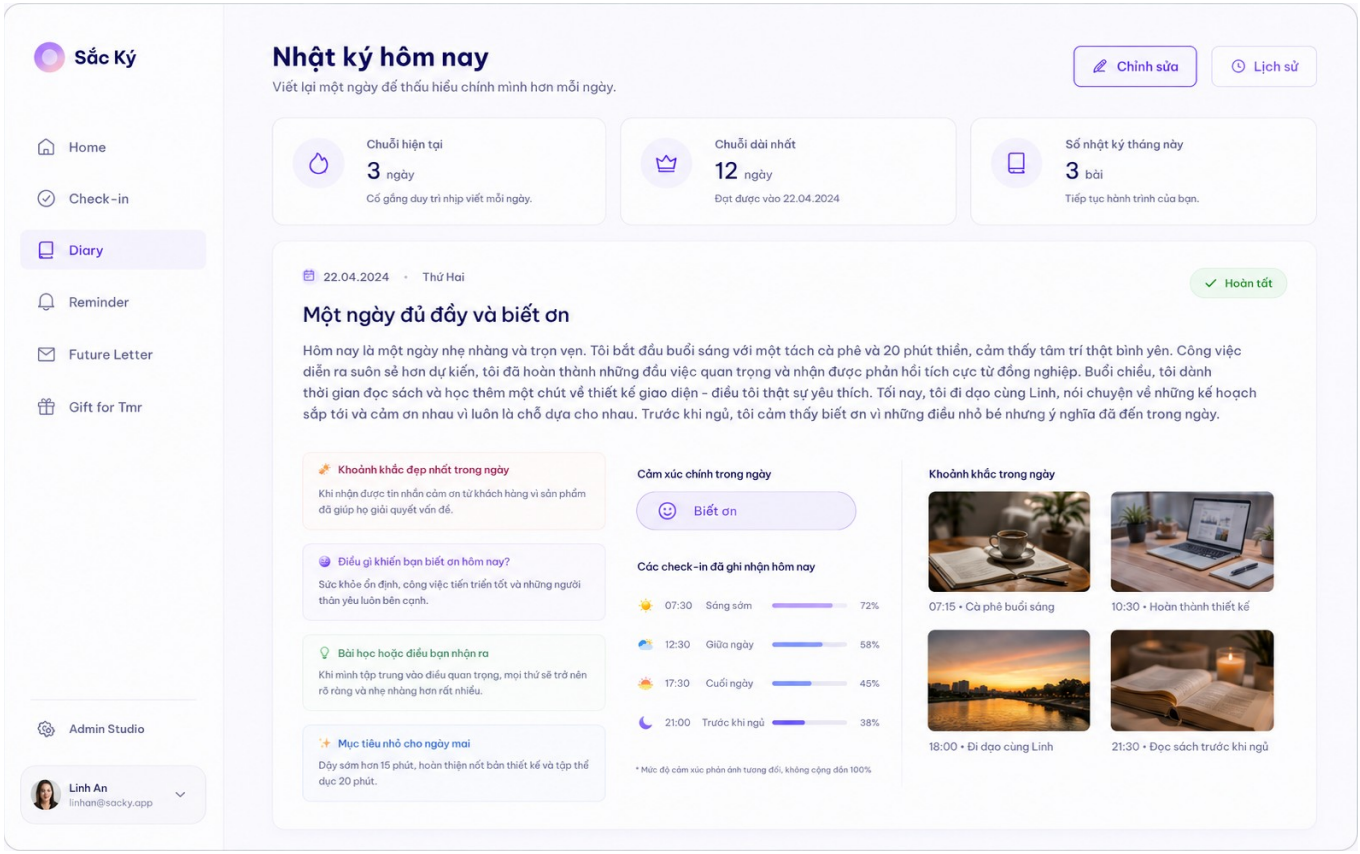

Approved directional mockup — D02 — Landing / Draft Today

Implementation requirements

- Draft badge + date + title/Overall preview.
- Prompt progress/attachment summary nhẹ.
- CTA Tiếp tục viết.
- Draft xuất hiện như canonical object, không phải local-only fake card.

D03 — Landing / Done Read Mode

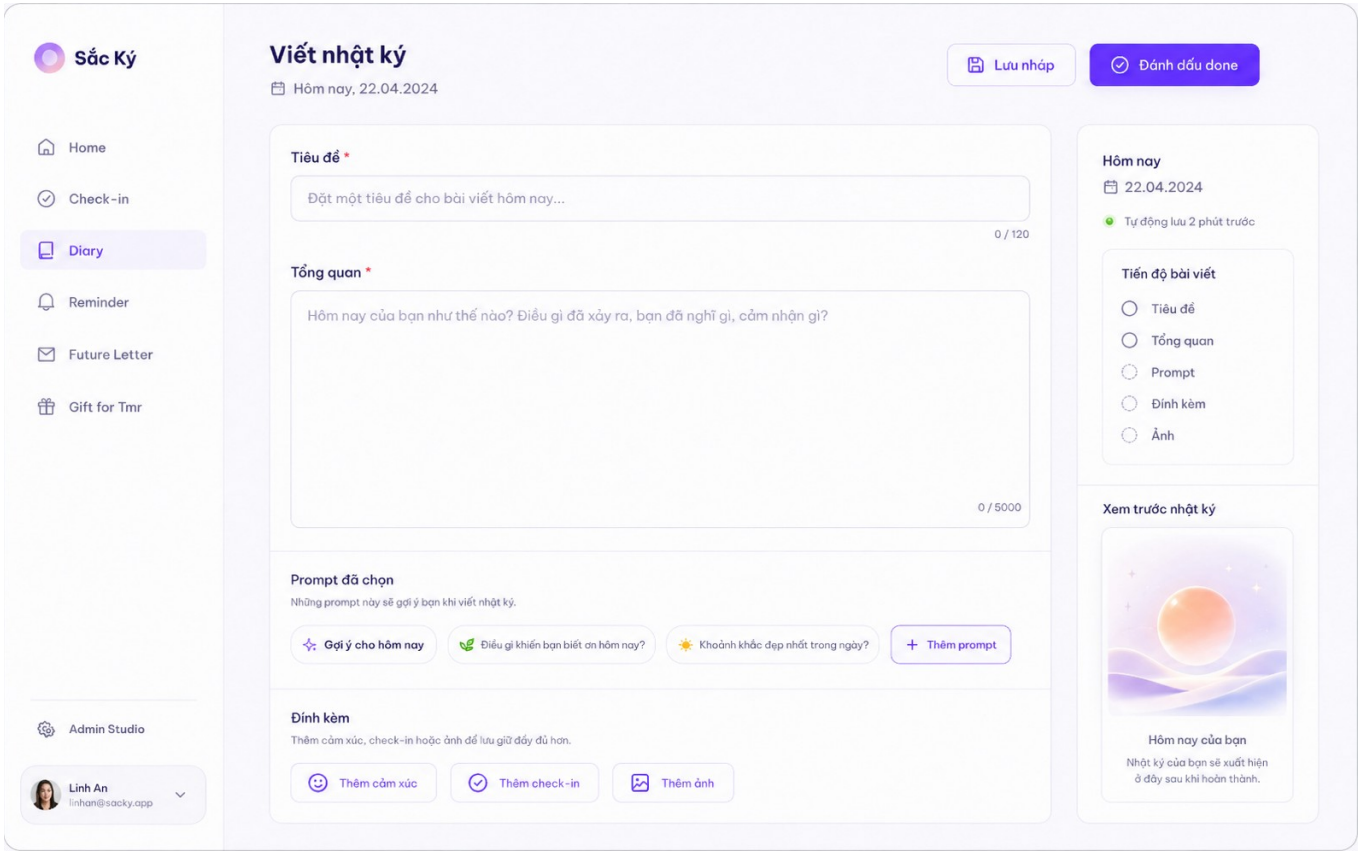

Approved directional mockup — D03 — Landing / Done Read Mode

Implementation requirements

- Read-only entry.
- Prompt responses, Daily Emotion, Check-ins + percentages, images.
- Page-level Chỉnh sửa.
- Không nhồi edit controls vào từng section ở read mode.

D04 — Core Editor

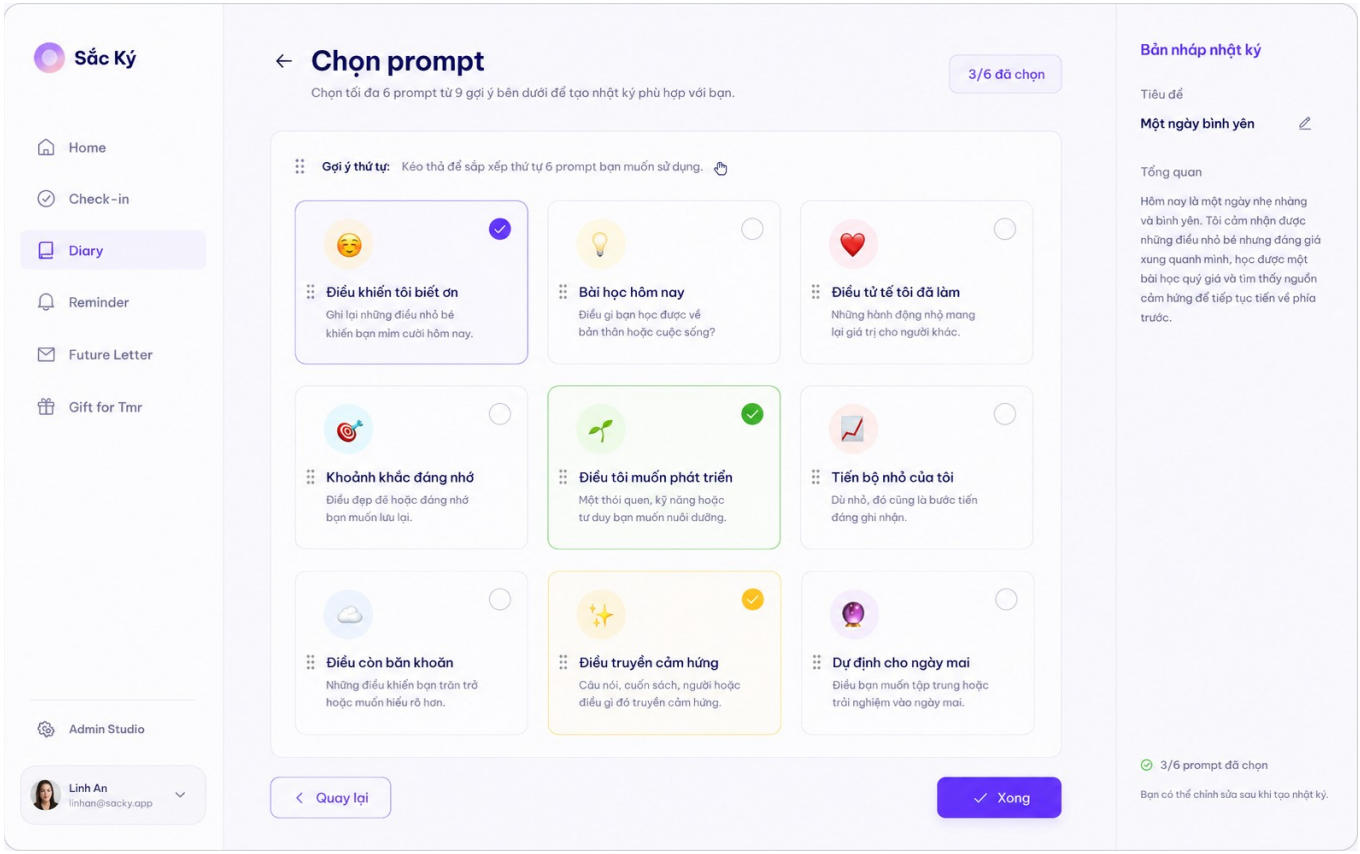

Approved directional mockup — D04 — Core Editor

Implementation requirements

- Title * + Overall *.
- Prompt area và attachment entry points.
- Save Draft + Mark Done.
- Autosave feedback; no rich-text toolbar.

D05 — Prompt Selection

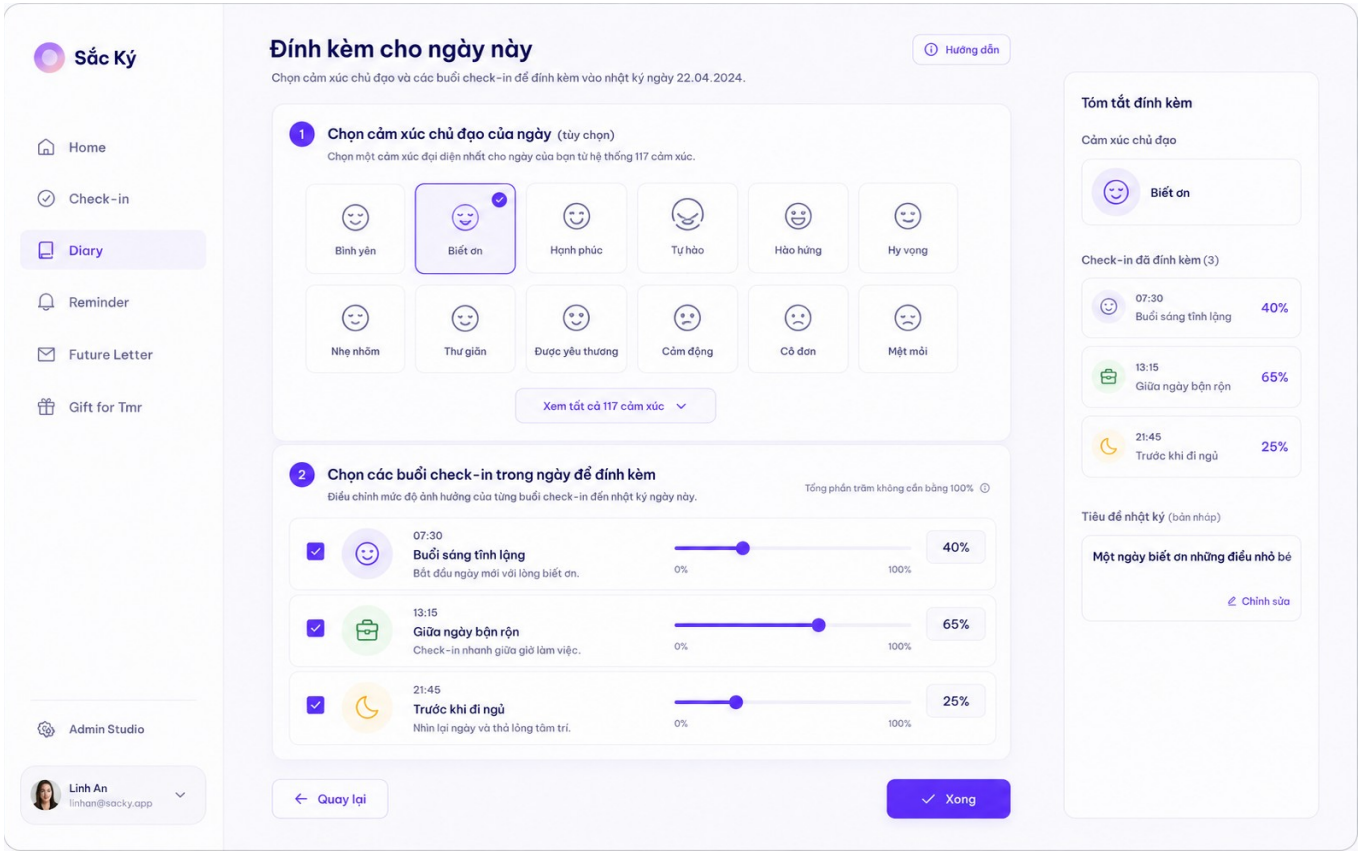

Approved directional mockup — D05 — Prompt Selection

Implementation requirements

- Prompt pool từ DB.
- Max 6; counter X/6.
- Emoji + subtle prompt hex accent.
- User selection order preserved.

D07 — Daily Emotion + Check-in Attachments

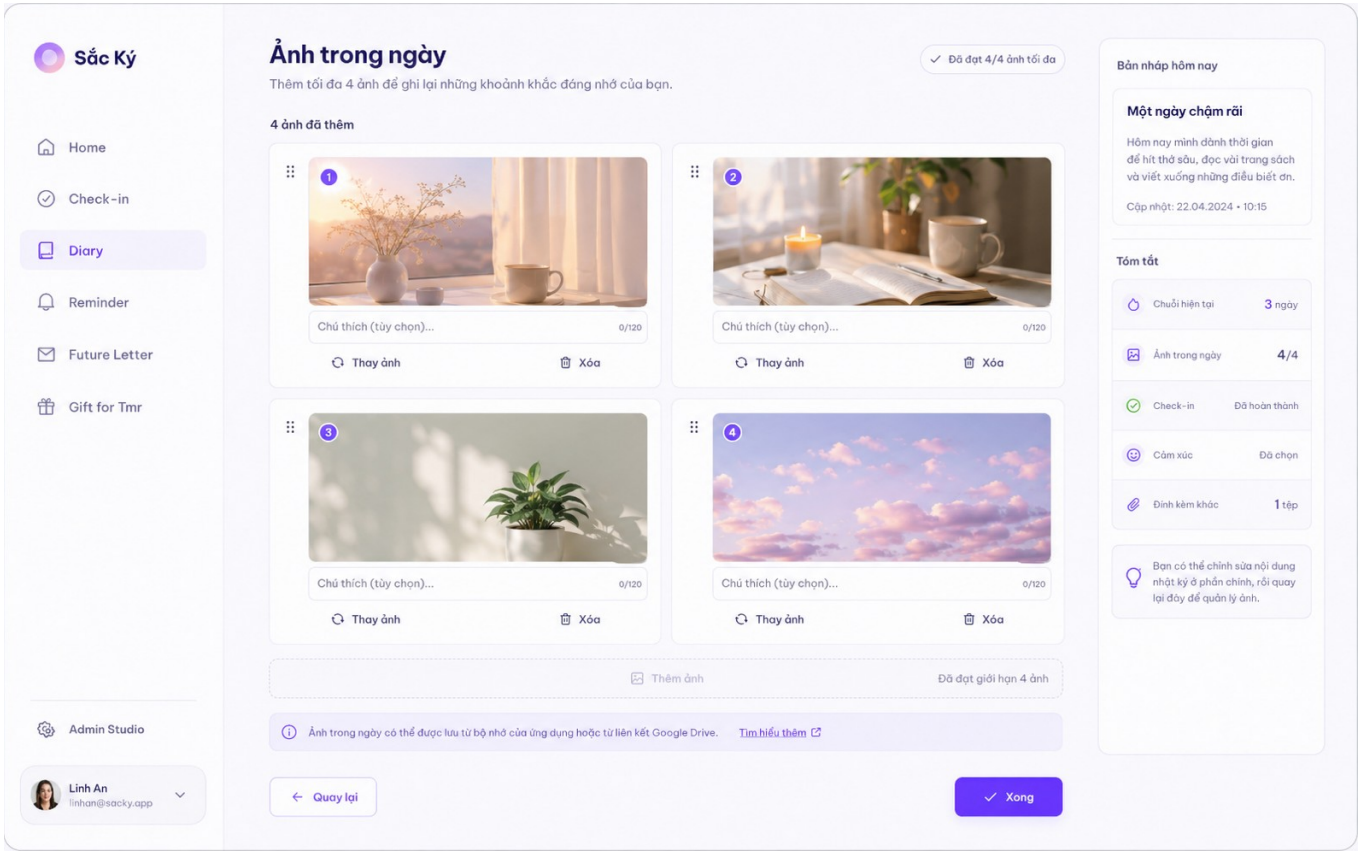

Approved directional mockup — D07 — Daily Emotion + Check-in Attachments

Implementation requirements

- Daily emotion 0–1.
- Same-day Check-ins only.
- Independent weight sliders.
- No total=100% validation.

D08 — Image Manager

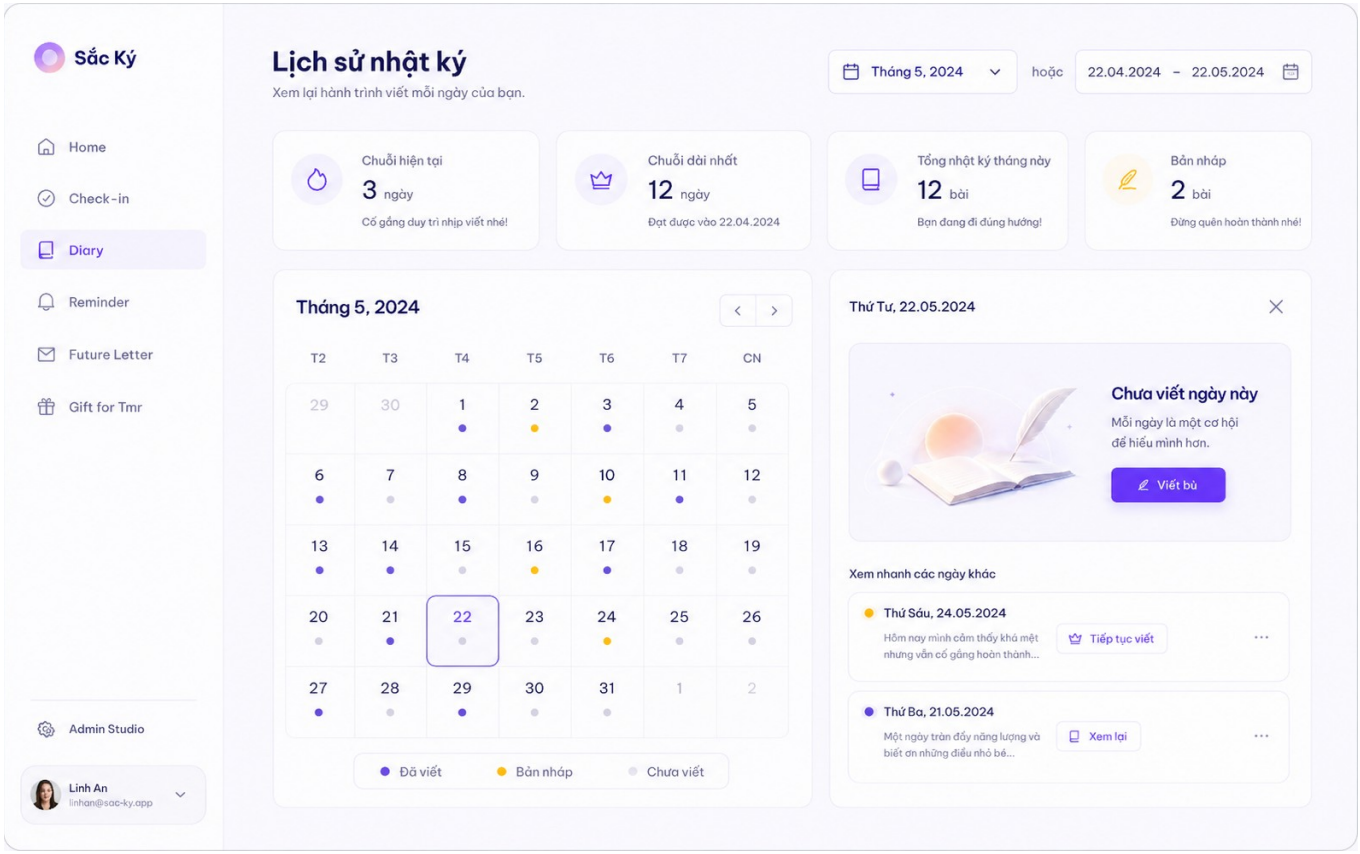

Approved directional mockup — D08 — Image Manager

Implementation requirements

- 0–4 images.
- Reorder + caption + replace + delete.
- Clear 4/4 limit state.
- External storage-neutral UI.

D09 — History Calendar + Dashboard

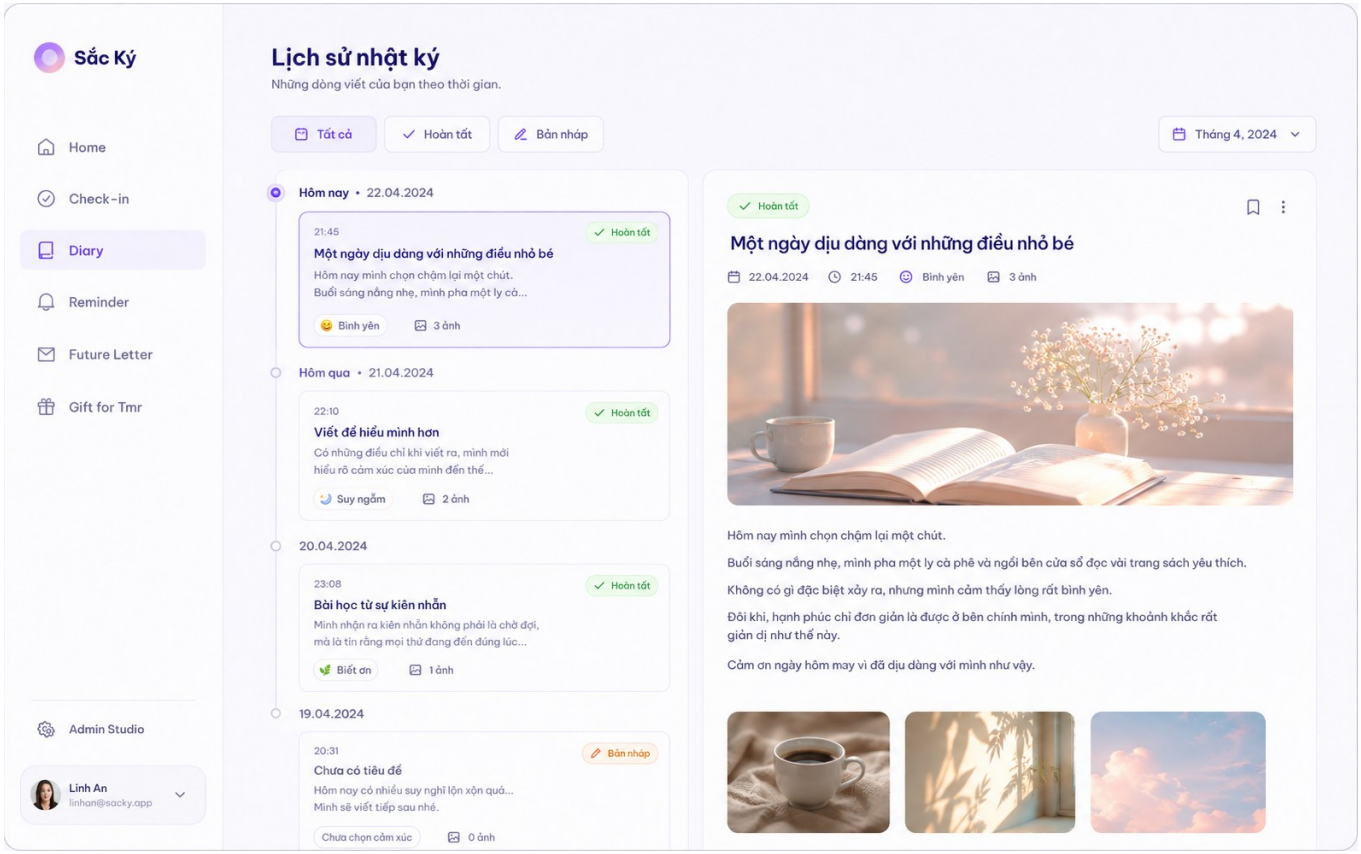

Approved directional mockup — D09 — History Calendar + Dashboard

Implementation requirements

- Calendar day states: Done / Draft / Not written.
- Dashboard: streak + longest + total + draft count.
- Missing historical day → Viết bù.
- Draft → Tiếp tục; Done → Xem lại.

D10 — History Editorial Timeline / Detail

Approved directional mockup — D10 — History Editorial Timeline / Detail

Implementation requirements

- Left timeline/list; right selected Diary detail.
- Filters All / Done / Draft + month/range.
- Detail shows status, title, emotion, Overall, prompts, images, Check-ins.
- Read/edit/delete act on canonical Diary.

D06 — Prompt Response Editor

Prompt response editor is a dedicated editor state/section even when implemented inside the main Diary editor.

- Render selected prompts in user-defined order.
- Each prompt shows emoji + prompt text + multiline response.
- Each prompt has Done/tick and Remove.
- Prompt hex may tint border/icon/background subtly.
- Done/tick does not gate Diary completion.
- Removing a prompt with text asks for confirmation.

7. Diary Lifecycle & Persistence

- NO_ENTRY → DRAFT → DONE.
- DONE → EDITING_DONE → DONE.
- DRAFT/DONE → DELETED; date becomes writable again.
- Backfill uses the same lifecycle with a historical local_date.
- Autosave must preserve Title, Overall, prompt selection/order/text/ticks, emotion, Check-in links/weights, image metadata/captions.

Known risk from legacy Diary: text was previously lost on re-render/reload. This must be treated as a critical regression area. Valid user text must not disappear during ordinary component re-render, navigation inside Diary, prompt changes or attachment flows.

8. Streak & Dashboard

- Current Diary streak.
- Longest Diary streak.
- Done count in selected month/range.
- Draft count.
- Recommended v1: streak day requires Done Diary; Draft does not count.
- Backfill may recompute historical continuity so History reflects canonical truth.

9. History & Backfill

- Calendar is primary historical navigation.
- Done day: View / Edit / Delete.
- Draft day: Continue / Delete.
- Not written day: Write Backfill.
- Backfill editor must clearly display target historical date.
- Backfill Check-in picker only shows Check-ins from that historical date.

10. Home Integration

- Home Nhật ký hôm nay consumes the same canonical Diary object.
- No entry → write CTA.
- Draft → title/excerpt + Tiếp tục viết.
- Done → title/excerpt + Xem nhật ký.
- Home must not own a copy of Diary state.

11. Responsive & Accessibility

- MacBook/16:10 desktop is the first visual acceptance viewport.
- At intermediate width, stack rails before squeezing editor content unreadably.
- Mobile: single-column; summary becomes inline/collapsible; prompt/image grids reflow.
- Selected states must not depend only on color.
- Status Draft/Done must include text.
- Visible focus, keyboard support, touch-friendly sliders and controls.
- Reduced motion respected.

12. Acceptance Criteria

☐ Exactly one Diary per user/local_date.
☐ Title and Overall required; plain text/multiline only.
☐ No Diary color picker anywhere.
☐ Draft and Done both persist and appear in History.
☐ Edit Done remains Done after Save.
☐ Prompts max 6, from existing Prompt DB, selected order preserved.
☐ Prompt tick works but does not gate Diary Done.
☐ Removing written prompt asks confirmation.
☐ Daily Emotion and Check-in attachments can coexist.
☐ Check-in weights are independent and may total less or more than 100%.
☐ Diary weights never change Check-in/Orb semantics.
☐ Max 4 images with reorder/replace/delete/caption.
☐ History identifies Done / Draft / Missing days.
☐ Missing historical day supports Write Backfill.
☐ Draft resumes without losing text.
☐ Home reads canonical Diary.

13. Suggested Implementation Slices

Slice 1 — Canonical Diary + Today Landing

- one-entry-per-day rule
- Empty/Draft/Done states
- Title + Overall
- Draft persistence

Slice 2 — Prompt Backbone

- Prompt DB query/type verification
- max 6
- selected order
- response + Done state

Slice 3 — Emotion + Check-in Links

- 117 Emotion picker
- same-day Check-in query
- independent weights

- Unknown differentiation

Slice 4 — Media

- max 4
- metadata
- reorder/caption/replace/remove
- external storage boundary

Slice 5 — Read/Edit/Delete

- read mode
- Edit Done semantics
- delete

Slice 6 — History

- calendar
- streak/dashboard
- Draft/Done/Missing
- backfill
- timeline/detail

Slice 7 — Home + Hardening

- Home Today Diary
- responsive
- accessibility
- persistence/error regression

14. Definition of Done

- All Today Landing states work.
- Prompt flow works end-to-end.
- Daily Emotion + Check-in attachments work simultaneously.
- Image manager supports max 4.
- History/Backfill/Streak work.
- No user-entered text disappears.
- No Diary color picker exists.
- Visual direction matches approved mockups on MacBook desktop.
- Lint/tests/build + authenticated browser acceptance pass.
